

RFID

Instant Traceability

We offer to our customers as a part of our standard range the option to have RFID chip installed in stud link chains to obtain instant traceability.

We offer this solution for wireless identification and tracking to give the possibility to track each link and obtain necessary information in a software system. This will improve business processes and enable value creation for our customers.

Ramnäs has as first chain supplier delivered chains with the RFID chip applied and the chains are now installed offshore.

Following link by link

Logistics may often prove to be a challenge when handling complicated and heavy products like Ramnäs anchor chains. With a long experience of heavy transports and close co-operations with skillful collaboration partners, we can offer support throughout the delivery from factory to the final destination.

An example of such an operation is the survey and monitoring of the discharging and onshore handling/transport of 4450 tonnes anchor chains and accessories at Port Harcourt, Nigeria. This operation was successfully supervised by Ramnäs representative together with local companies.

Innovating for top quality – Ramnäs all the way
